

Supply Chain Managed Services

Connect to everyone through OpenEDI™®

With Transalis Supply Chain OpenEDI™ there is no software or EDI knowledge required. OpenEDI™ is used by large organisations such as **Argos, Microsoft, PLAY.com & Tetley** & 1,000's of other companies for the complete EDI order-to-invoice cycle for 1,000's of suppliers & buyers. With OpenEDI™ there's nothing stopping any organisation rolling out EDI to all their large, small & medium size trading partners for **total supply chain EDI enablement**.

Global Supply Chain EDI Enablement

Supply Chain EDI the way you want it! Low cost, high productivity, optimized processes with Managed Services for Web, Integrated & Supply Chain EDI.

OpenEDI™ provides total supply chain EDI enablement with no system changes required. Previously retailers had the complex problem of dealing with suppliers & buyers by handling orders & invoices etc by phone, fax, email, post & EDI. Now with OpenEDI™ any retailer need only deal with one method of communication in order to reach their whole supply chain by EDI.

Large organisations deploying EDI find it a challenge to onboard smaller & mid-size trading partners. Whilst large organisations trade electronically, constraining factors prove prohibitive to reusing the same approach with smaller partners. High costs, limited IT support, lack of infrastructure & modest trading volumes are stated by partners as obstacles to EDI.

Transalis developed OpenEDI™ to solve this problem. Transalis offers a complete rollout package in terms of planning, implementation & latest technology. OpenEDI™ enables trading partners to be onboarded rapidly with minimal IT requirements for all trading partners **via any PC & internet enabled device.**
